NWRM practical guide

Pilot Project - Atmospheric Precipitation - Protection and efficient use of Fresh Water: Integration of Natural Water Retention Measures in River basin management

Service contract n°ENV.D.1/SER/2013/0010

The NWRM practical guide: what for?

Pierre Strosser
ACTeon (France)

Accompanying NWRM design and implementation

The “novelty” and diversity of NWRM...

... Responding to a wide range of contexts, objectives and challenges (WFD, FD, adaptation, SUD...)

In parallel to building a collective knowledge (Task 1) and sharing practice and experience (Task 2), efforts put for developing a practical NWRM guide

What is expected from us?

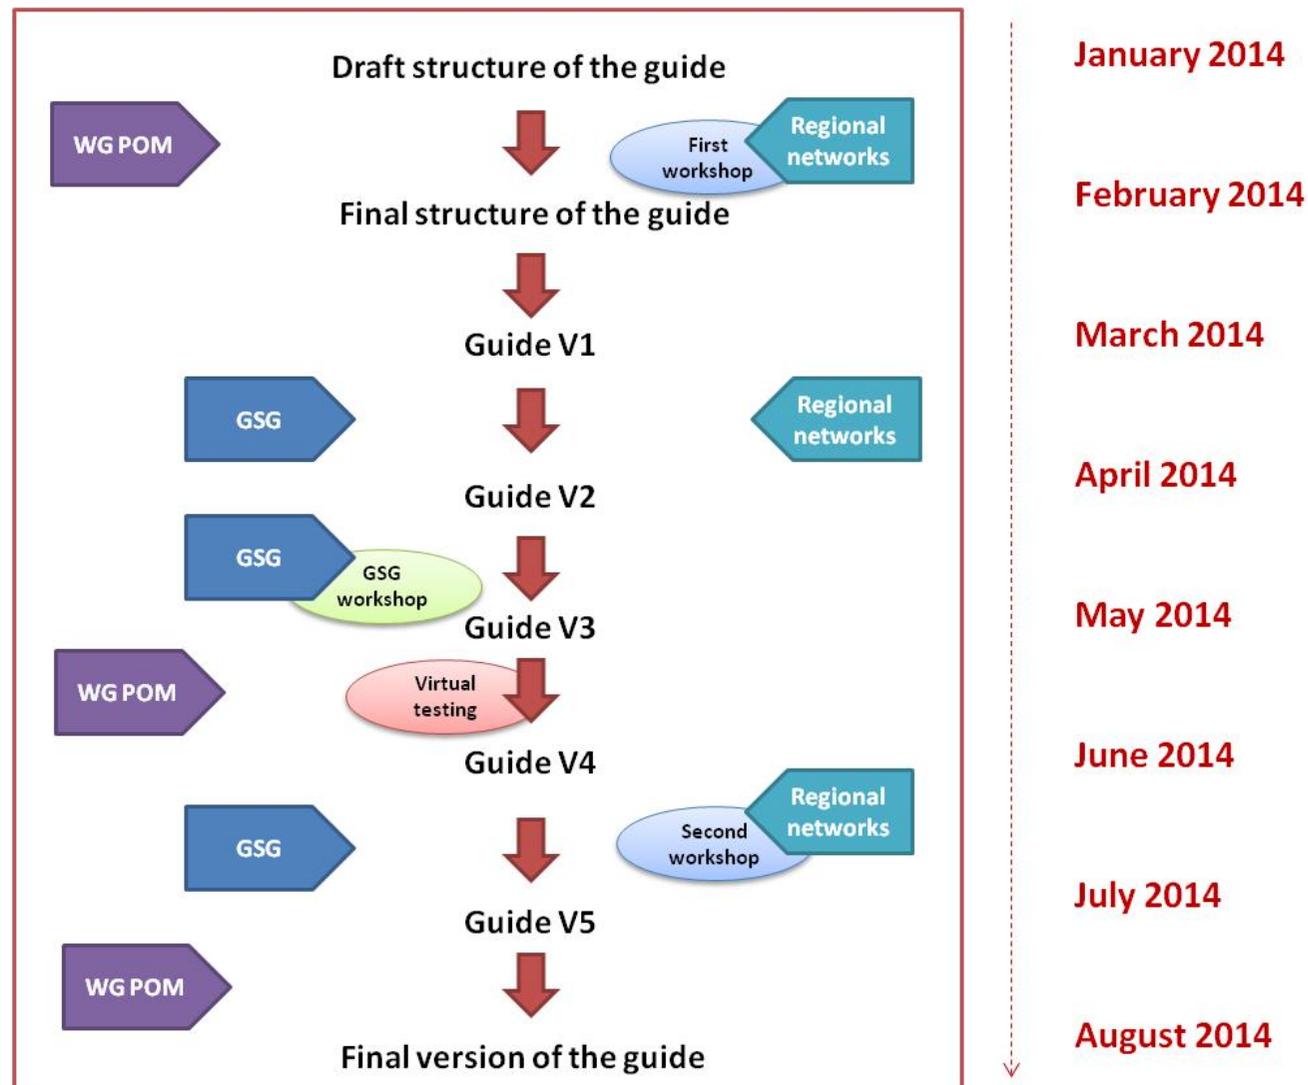

Practical & operational (how “best” to do) – complementing a CIS NWRM policy document

For those involved in the design & implementation (WFD & FD, but wider)... but potentially financing

Connected to the collective knowledge base (facilitating navigation)

As an electronic version, and also a paper version... Or several ones: in English and main text translated into all EU languages

Which process proposed for developing the practical guide?

What could be the structure of the guide?

Part I – The basics

- What are NWRM?
- Why to implement NWRM? Because...
- How to design NWRM?
- Which pre-conditions for successful NWRM?

Part II – The experiences

- Overall picture
- The experiences (fact sheets)

Part III – The tools

- Glossary
- Widening the knowledge base
- Methods and tools

What could be “in” the guide?

- Text
- Quiz or multiple-choice questions
- Data and information from the different case studies
- Results from the comparative assessments made between case studies
- Schematic diagrams
- Direct feedbacks and “share of experience” from practitioners
- Photos that help understanding “NWRM in practice”
- Data sources, internet site contact details of experts/practitioners/organisations

For now?

More details on the elements of this presentation are included in the consultation note shared with you

It specifies a series of questions for which your input and feedbacks is required for adapting, developing, refining...

- The process we will follow (and your interest in having a specific role in this process)
- The structure of the practical guide
- The type of content to be included

A photograph of a rooftop garden with a dense field of purple flowers in the foreground. In the background, a modern city skyline is visible under a clear blue sky. The buildings are a mix of glass-fronted skyscrapers and more traditional concrete structures. A construction crane is visible in the distance. The overall scene is bright and clear, suggesting a sunny day.

Many thanks for your attention
